----

Dear **Hiring Manager,**

I'm excited to apply for the Frontend/Backend Developer position at your organization.

This role perfectly aligns with my passion for building elegant, high-performance web applications and my experience delivering end-to-end software solutions.

Over the course of my career, I've worked across both frontend and backend development, leading small teams and contributing to large-scale projects. My experience covers all phases of the software lifecycle from gathering requirements and estimating tasks to developing complete features and collaborating closely with product and design teams. Additionally, moderated a **Scrum Team** and handling **release management** has strengthened my ability to drive projects efficiently.

On the frontend, I've built user-centric interfaces using **React.js, Angular, and Vue.js**, complemented by modern tooling such as **Vite** and **Vercel**. I've also implemented and secured **REST and GraphQL APIs** with **JWT authentication and** set up **CI/CD pipelines using GitHub Actions** to enable smooth, automated deployments.

Beyond work, I'm an active learner who enjoys experimenting with new technologies. Some of my recent projects include:

- A **Spring Boot** application containerized with **Docker** and deployed on **Kubernetes** for production scalability.
- An **open-source npm package (@satheeshpolu/utils-package)** to simplify common frontend utilities.
- A **React + Vite e-commerce app** deployed seamlessly on **Vercel** for fast, scalable performance.

I thrive in multicultural, hybrid teams and am always eager to take on complex challenges that make a real impact. I would love the opportunity to discuss how I can contribute my skills to your development team.

Thank you for your time and consideration.

Best regards,
Satheesh Polu
